

ASTHMA PATIENT REVIEW SERVICE

BASELINE DASHBOARD REPORT

This service is funded by and delivered on behalf of Chiesi Ltd, as a service to medicine, by Interface Clinical Services.

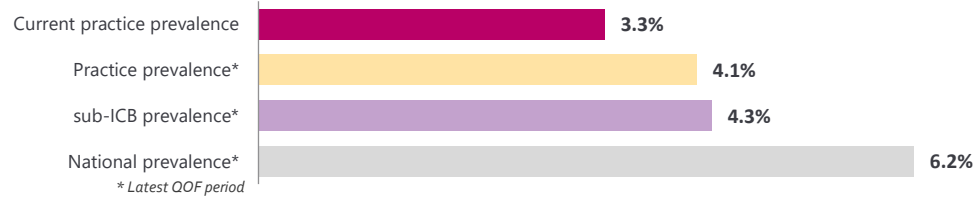

F85072 Grovelands Medical Centre

DATE OF REPORT: 17/09/2026

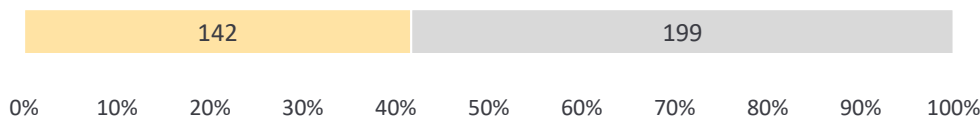

ASTHMA PREVALENCE & REGISTER ANALYSIS

Date of baseline dashboard report	Registered practice population	Patients on the asthma register	Current prevalence of asthma
17/09/2026	10427	341	3.27%

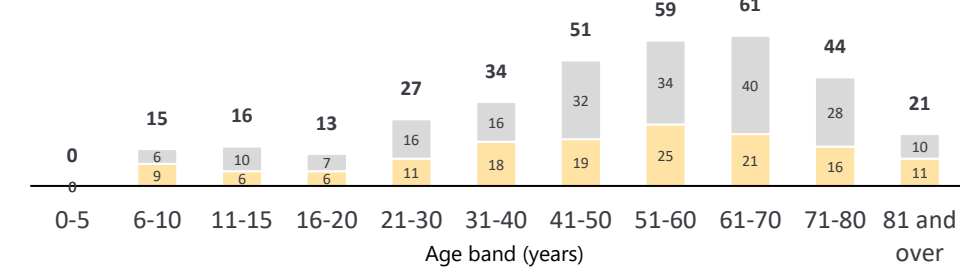

Comparison of practice QOF prevalence with Sub-ICB/Health board and national

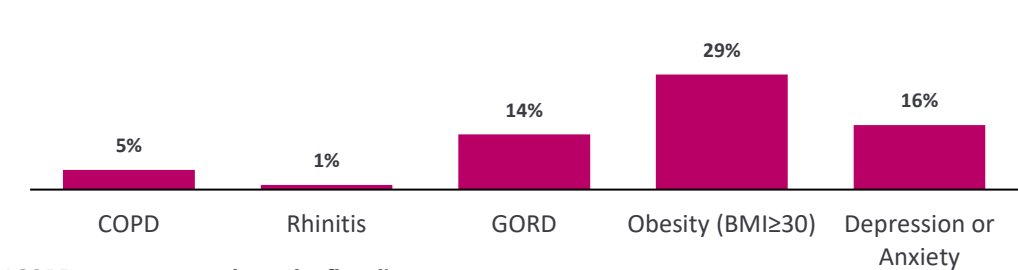

Demographic analysis (taking into account gender and age)

Age band with respect to gender

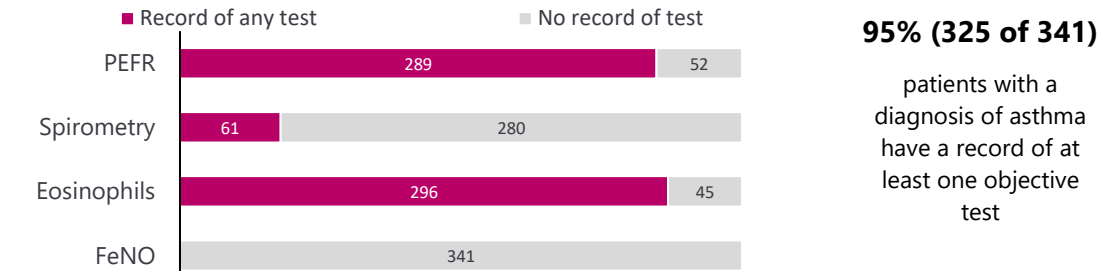

Prevalence of co-morbidities in patients with asthma

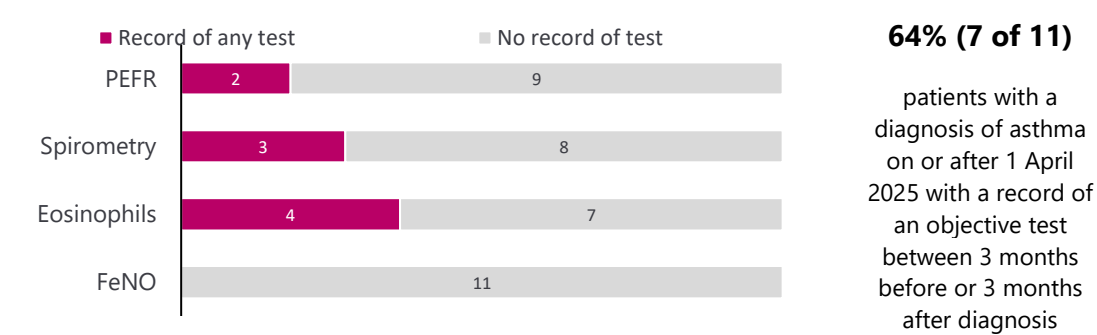

*GORD = gastro-oesophageal reflux disease

Evidence of tests for asthma diagnosis (all patients on the asthma register)

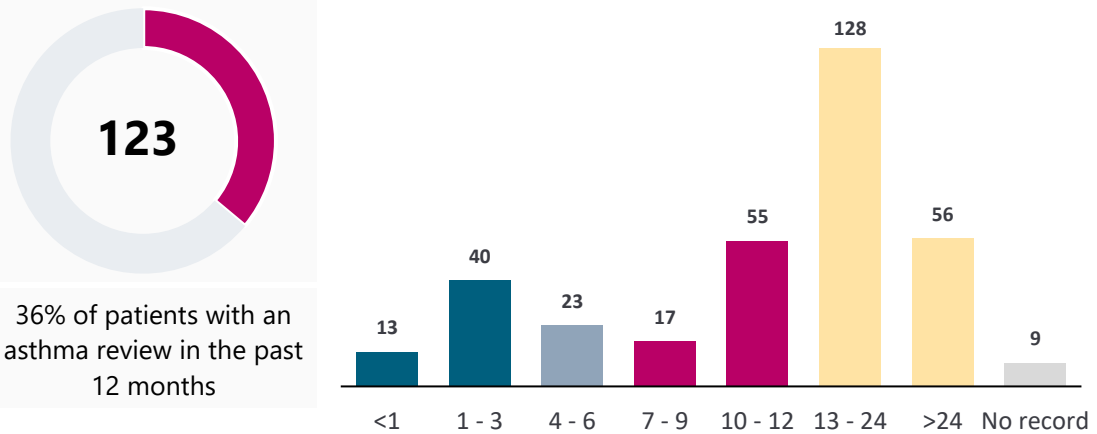

PEFR = peak expiratory flow rate, FeNO = fractional exhaled nitric oxide

Evidence of tests for asthma diagnosis (diagnosis of asthma since April 2025)

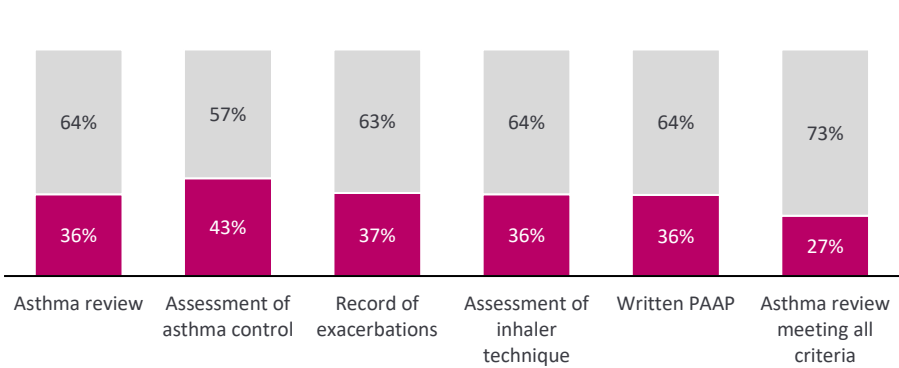

Length of time since last recorded asthma review (months)

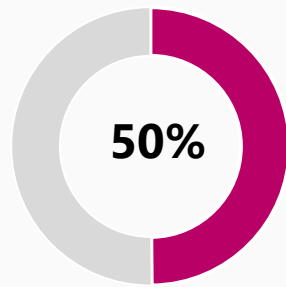

BASELINE ASTHMA CARE MARKERS (INCLUDES ALL PATIENTS ON THE ASTHMA REGISTER)

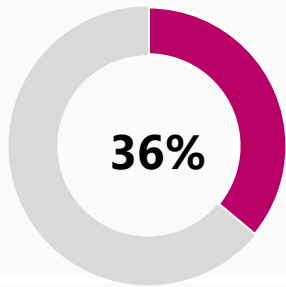

Assessment of management against NICE or QOF indicators within past 12 months

PAAP = personalised asthma action plan

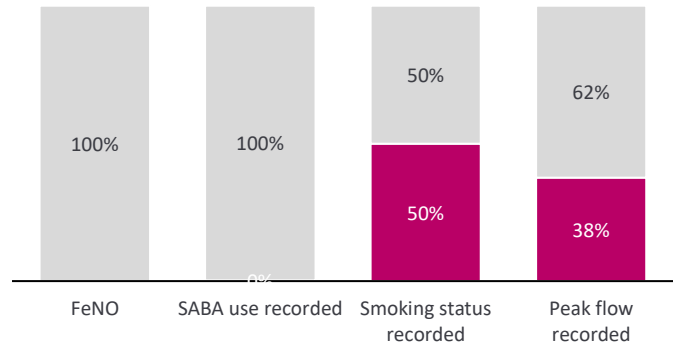

50% (170 patients) with smoking status recorded in past 12 months

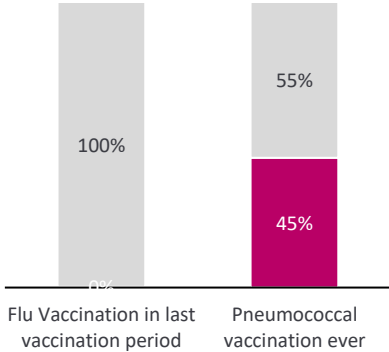

36% (123 patients) with a record of inhaler technique in past 12 months

Other key markers relevant to asthma (past 12M)

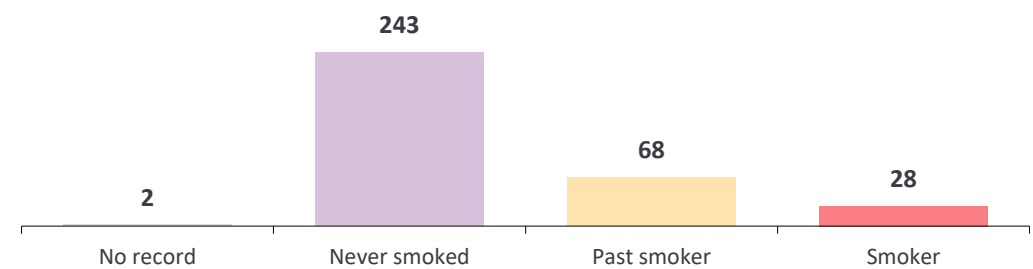

SABA = short acting beta-agonist

Record of vaccinations

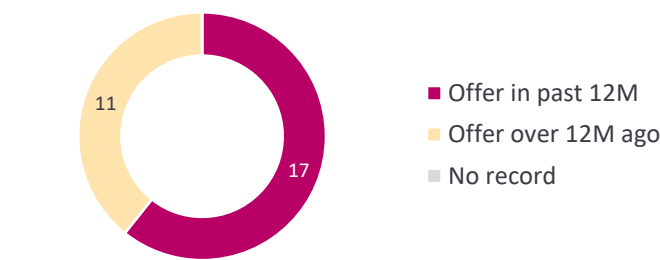

Latest recorded smoking status

96 (28%) patients with a diagnosis of asthma are current or past smokers

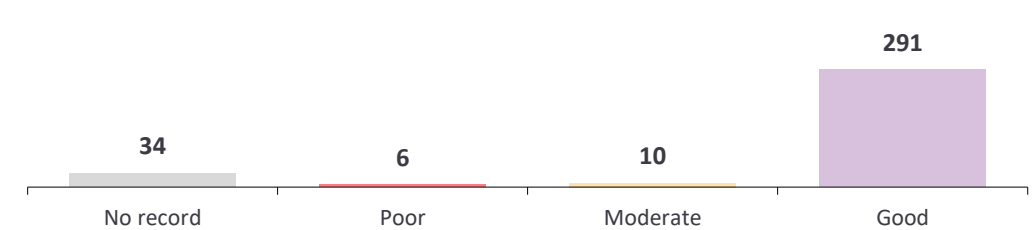

28 (8%) patients with a diagnosis of asthma currently smoke

Offer of smoking cessation (current smokers)

11 of 28 smokers (39%) have no record of an offer to smoking cessation in the past 12 months

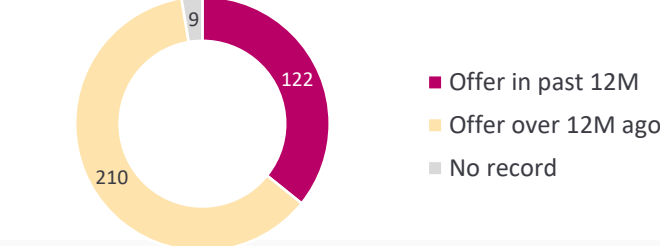

Latest recorded inhaler technique

16 (5%) patients with a latest record of sub-optimal inhaler technique

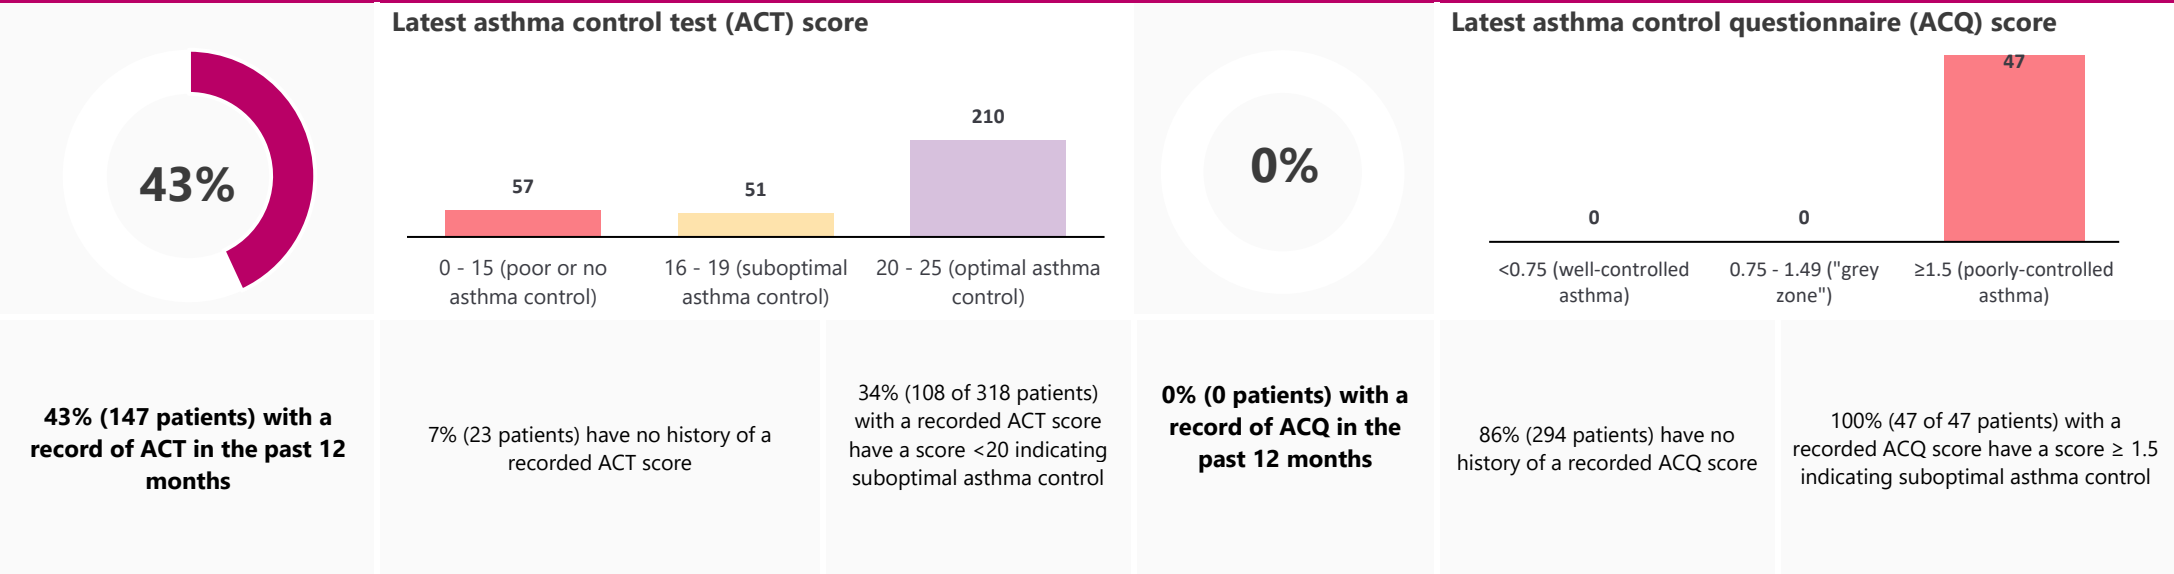

34 (10%) patients with no previous record of inhaler technique

Personalised asthma action plan (PAAP)

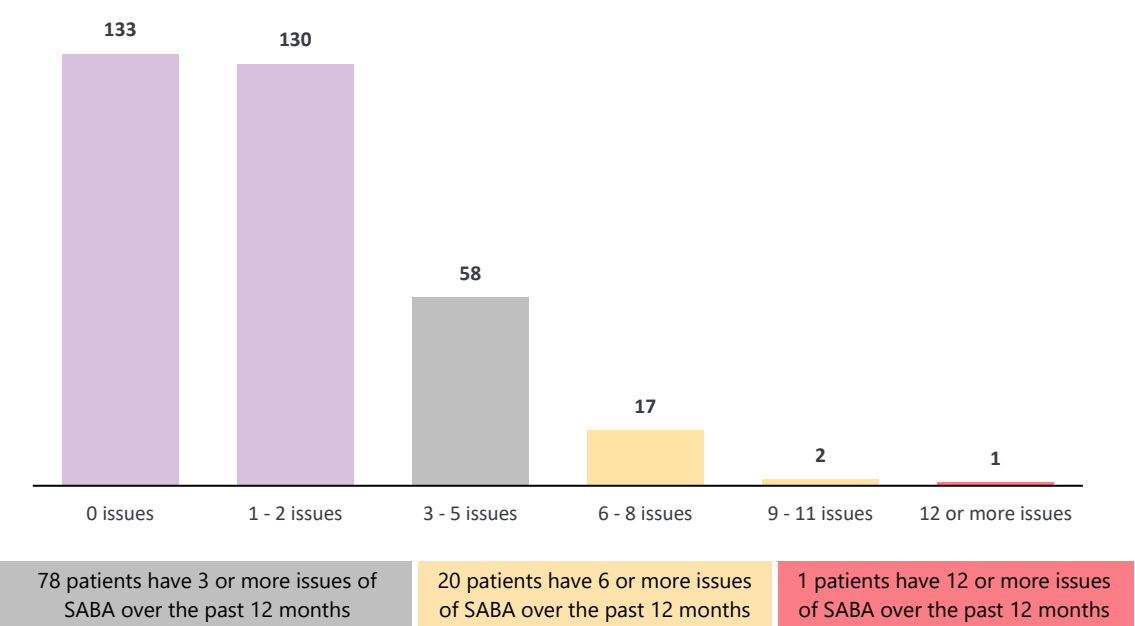

3% (9 patients) with no record of personalised asthma action plan (PAAP)

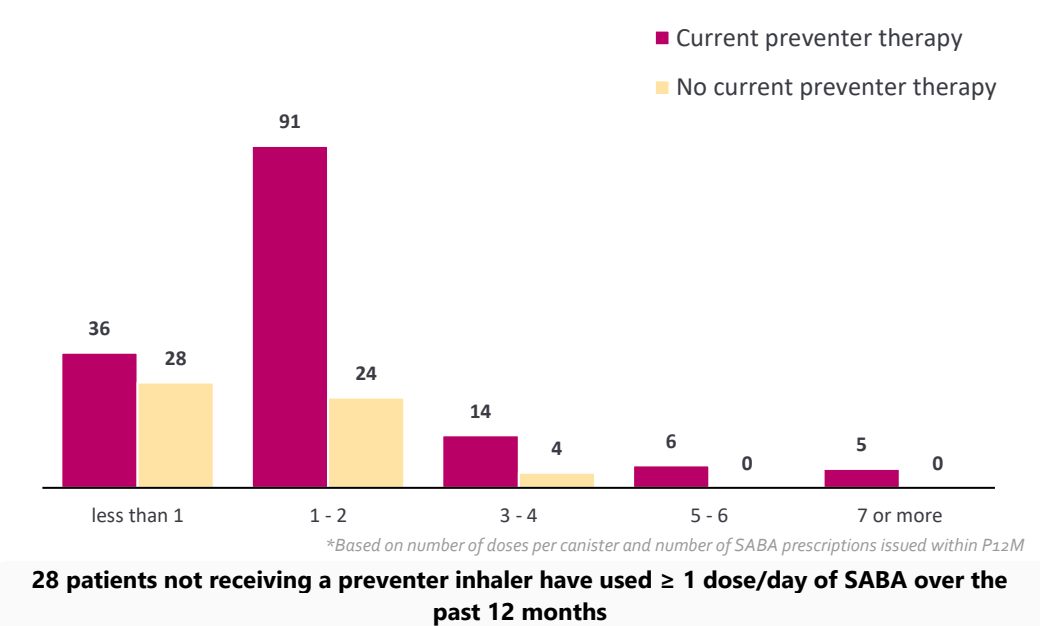

BASELINE MEASUREMENT OF ASTHMA SYMPTOMS

Number of SABA prescriptions (past 12 months)

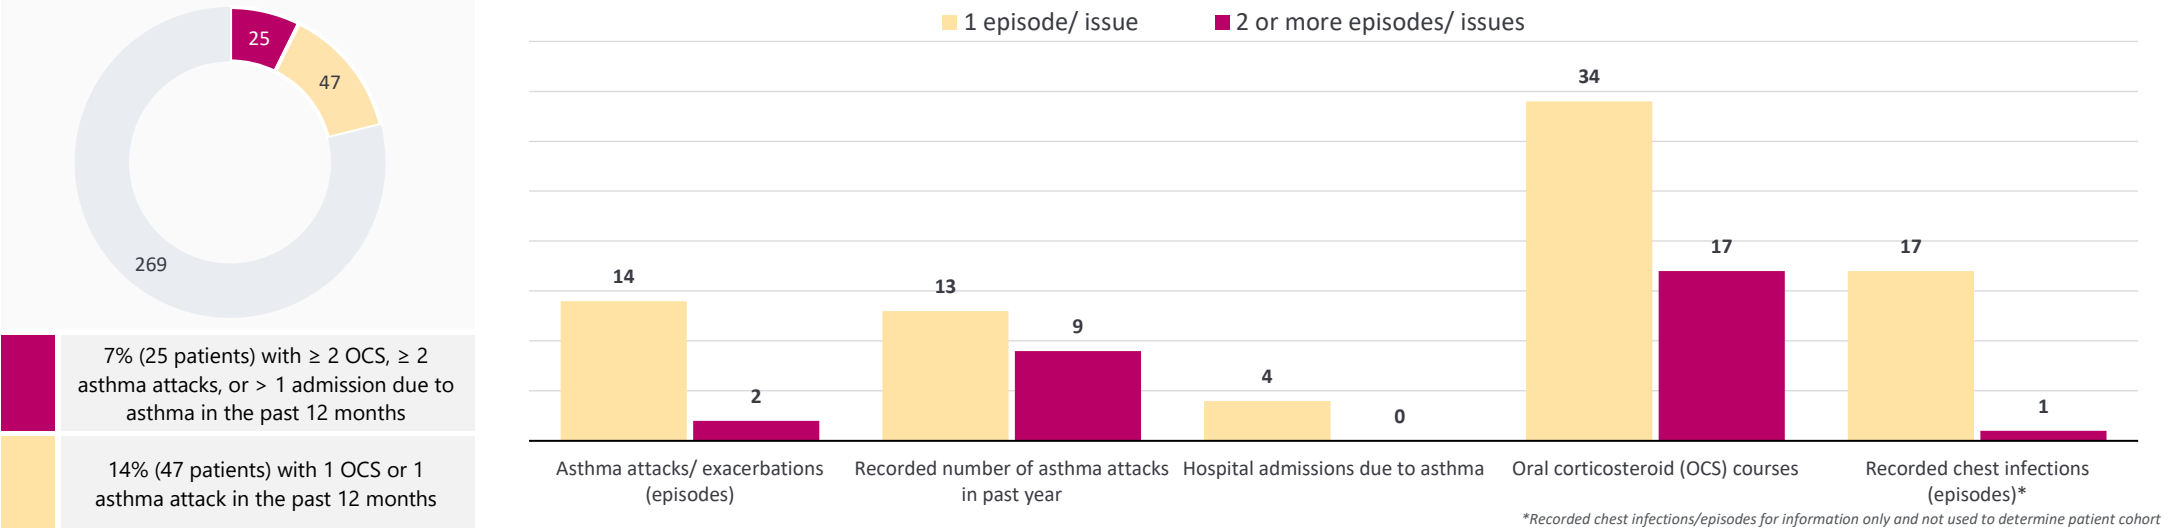

Number of SABA doses/day (past 12 months)*

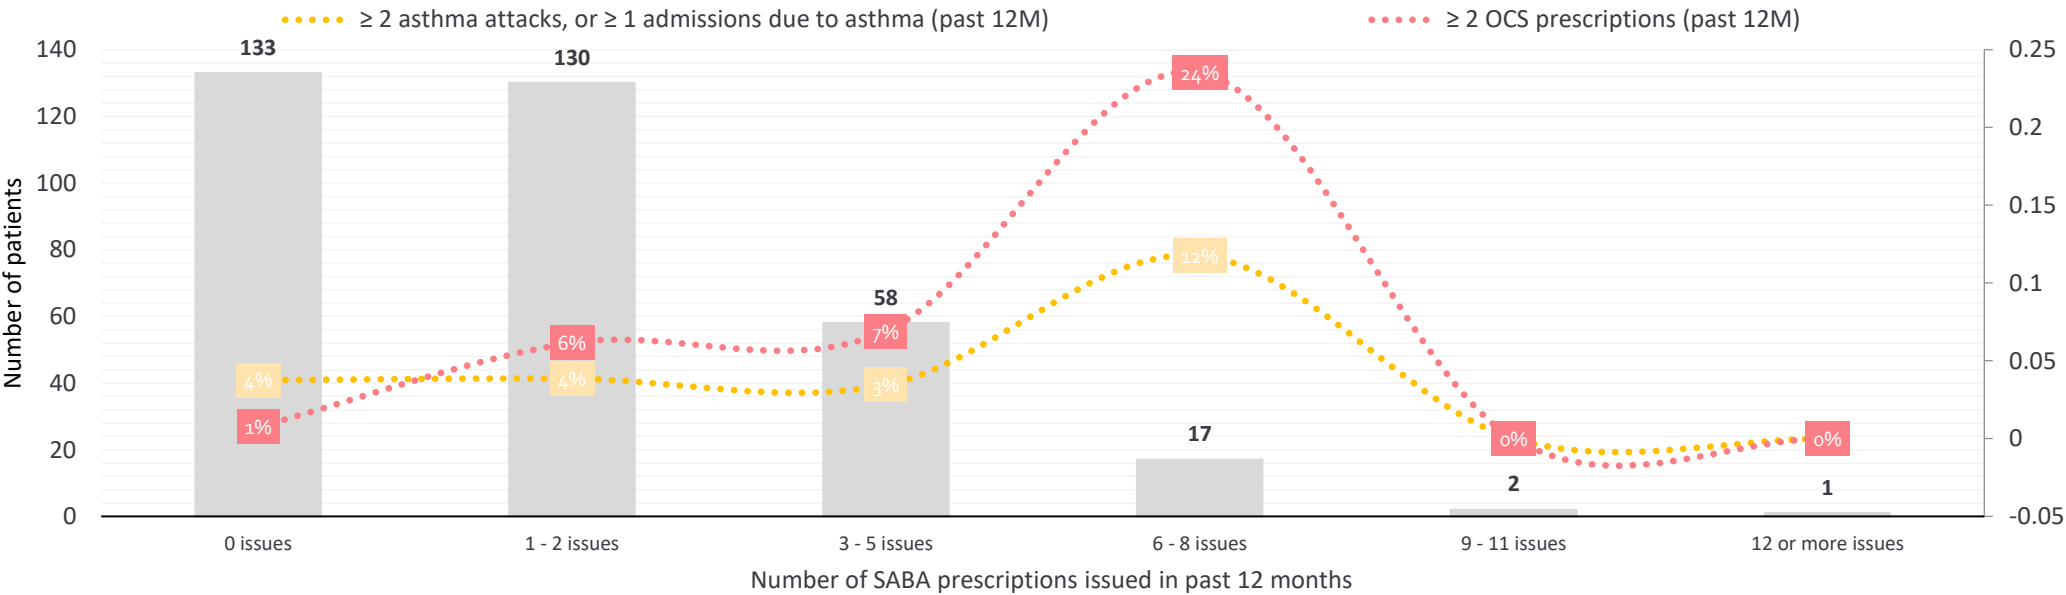

BASELINE ASSESSMENT OF ASTHMA ATTACK/EXACERBATIONS

12 month record of oral corticosteroid (OCS) issues, asthma attack episodes and hospital admissions due to asthma

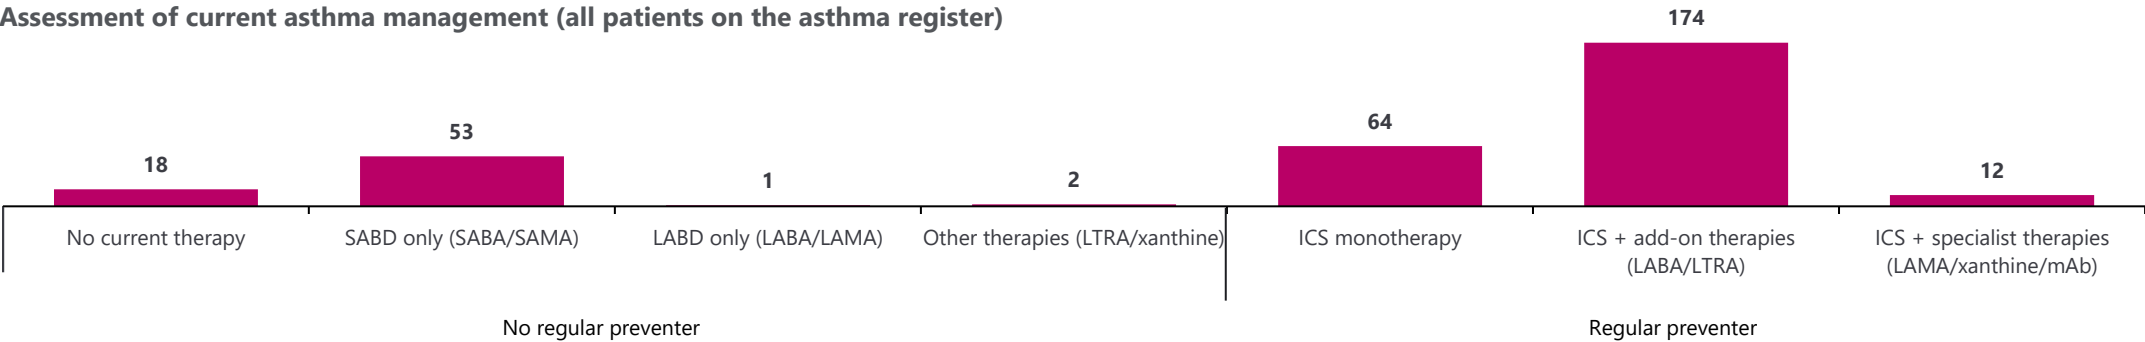

12 month analysis of markers of poor asthma control (based on symptoms and/or exacerbations) with respect to SABA issues

BASELINE ASSESSMENT OF CURRENT PHARMACOLOGICAL MANAGEMENT OF ASTHMA

Assessment of current asthma management (all patients on the asthma register)

SABD = short-acting bronchodilator, SABA = short-acting beta-agonist, SAMA = short-acting muscarinic antagonist, LAMA = Long-acting muscarinic antagonist, LABD = long-acting bronchodilator, LTRA = leukotriene receptor antagonist, ICS = Inhaled Corticosteroid, mAb = monoclonal antibody therapy

Patients with asthma to be considered for further assessment in line with clinical protocol

n = 341

≥6 ICS/LABA scripts AND [≥1 asthma attacks OR ≥1 OCS script OR ≥1 course of antibiotics* OR ≥1 hospital admission] in previous 12 months

**amoxicillin, erythromycin, doxycycline or clarithromycin for asthma exacerbation*

Breakdown of patients with asthma identified with respect to age and concurrent COPD

Assessment of pharmacological management with respect to identified cohort (excluding patients with asthma aged < 18)

PATIENTS FOR ASSESSMENT

305 Patients

28

5

0

0

0

0

Key pharmacological therapy class levels:

No current therapy (n = 0)

SABD only (SABA/SAMA) (n = 0)

LABD only (LABA/LAMA) (n = 0)

Other therapies (LTRA/xanthine) (n = 0)

ICS monotherapy (n = 0)

ICS + add-on therapies (LABA/LTRA) (n = 28)

ICS + specialist therapies (LAMA/xanthine/mAb) (n = 5)
