

Overactive bladder medicines optimisation review service

Practice Baseline Report

CLIICS Test Practice

XXXXXX

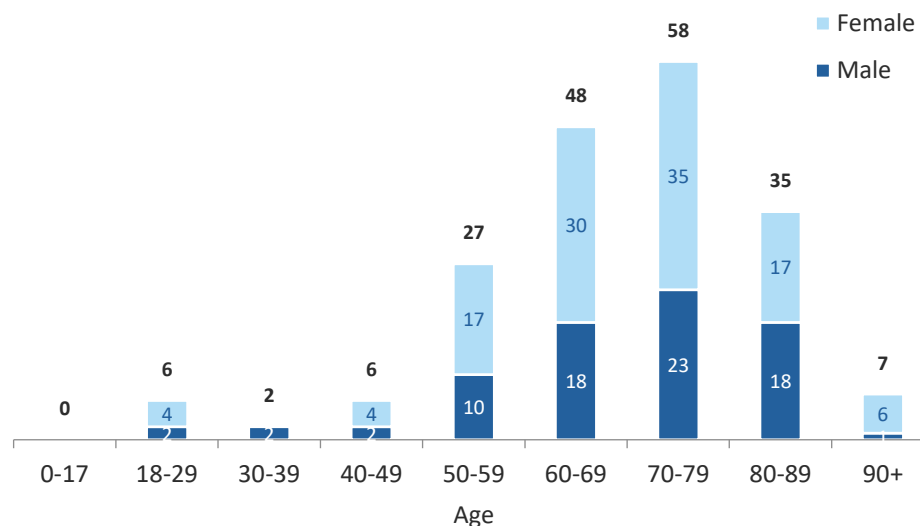

Report date: 08/09/2026

This non-promotional medical service is funded by Pierre Fabre Ltd and delivered independently by pharmacists employed by Interface Clinical Services: An IQVIA Company. Pierre Fabre Ltd has no involvement in clinical decision-making or patient management and will receive only anonymised, aggregated service-level information for service evaluation purposes. No patient-identifiable information will be shared.

This report is intended for viewing and use only by primary care providers involved in the provision of this service.

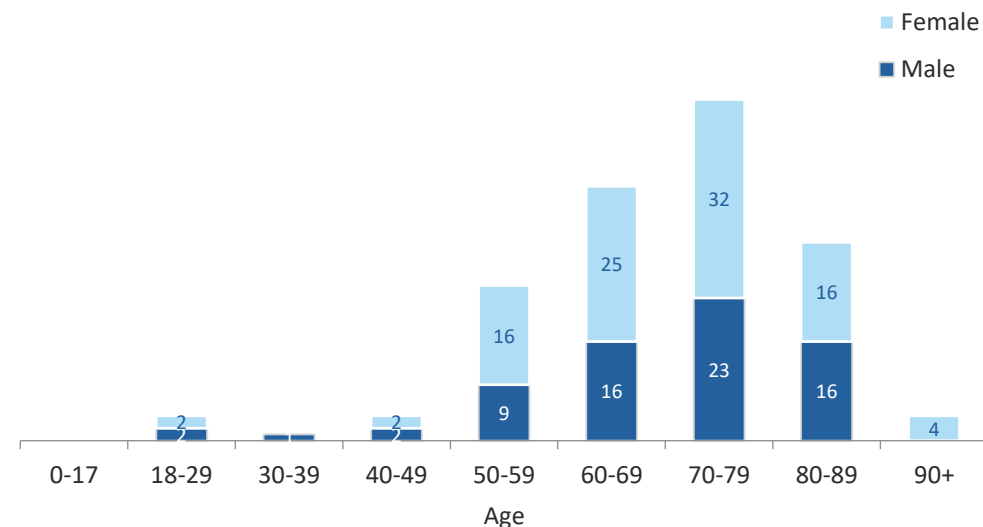

Patients identified in baseline search results

189 patients identified in baseline search results

Patients meeting protocol inclusion criteria

166 patients eligible for review after screening by IQVIA Interface

Patients meeting clinical protocol cohort criteria

Cohort	Definition
1	Patients with OAB currently receiving antimuscarinic therapy only
2	Patients with OAB currently receiving beta-3 agonist therapy only
3	Patients with OAB currently receiving antimuscarinic therapy and beta-3 agonist therapy
4	Patients with OAB symptoms who are not currently receiving active treatment, have evidence of previous treatment failure, and who may benefit from management optimisation and/or initiation of pharmacological therapy
